Dear Tom;

Heres my contest entry, not very much butyou asked for it. No instructions or documentation needed. Self running. I see a lot of interesting and usefull articals in SyncWare News. But I haven't yet found anything about the IN/OUT keys on the 2068 (I have 2 2068's and 1 TS 1000). I sure hope to see something soon about using the INPUT/OUTPUT PORTS.

I am interested primarily in hardware, building, cutting and trying. I have been an active experimenter all my life. 45 yrs servicing domestic electronics; radios, tvs and whatever else that uses tubes or transistors or IC's.

Just recieved a HEATH HERO JR. after a two month wait. Would like to use the TS 2068 as a terminal to program the little HERO. Well typing is not one of my best skills (as you can see), I'd rather point a hot soldering iron at a pc board, than write a note. Hang in there and keep on publishing those good articals.

Kindest Personal Regards,

Harry D. Peters
